UV Steriliser – The easy way to disinfect

The UV Steriliser is proven* to kill viruses and bacteria:

- **Escherichia coli**
- **Klebsiella pneumoniae**
- **Pseudomonas aeruginosa**
- **Staphylococcus aureus (MRSA)**
- **Feline Coronavirus**

*KRICT (Korea Research Institute of Chemical Technology): 10 sec. distance 10 mm

Safe sterilisation:

The handy UV steriliser disinfects in a simple and reliable way. After a short irradiation by the 13 UV-LEDs, surfaces are free of viruses and bacteria.

Safe handling:

The built-in "gyro sensor" ensures that the device only switches on when the LED side is facing down. The UV steriliser switches off auto-matically after 3 minutes.

Caution:

The UV-LEDs must not be directed to eyes and skin.
