#### FLOOR MODULE

ADJUSTED FLOOR MODULE

#### WE OFFER YOU INNOVATIVE SOLUTIONS FOR YOUR SANITARY ROOMS

HT SANSsystem is perfectly suitable for a **flexible, innovative interior layout of sanitary areas for new buildings, modernisations and renovations**. Due to its modular system construction HT SANSsystem stands for unique functionality, flexibility and efficiency.

The modular construction allows a variety of configurations and adaptations. Therefore the sanitary rooms can be adapted to the customers' and users' needs by means of size, design or equipment.

The modules are planned and produced project related. Single room components and modules are delivered to the site and in **only a few hours assembled** to an overall solution according to our customers' needs.

The system is specially characterised by its **short planning, delivery and installation times**. Subsequent installations and adaptations allow for an uninterrupted construction process. The delivery of single system components results in minimised logistics on site.

#### SPECIAL ADVANTAGES IN COMPARISON TO PRE-FABRICATED SANITARY MODULES

- // **No restrictions** in room size, layout and design
- // **Uninterrupted construction process** by the possibility of later installation of the system in each building phase
- // **Minimised logistics** due to delivery of single system components
- // Definition of interior design of the sanitary area at a later time
- // Reversible walls, ceilings, and installations
- // Open for a **later integration** of supplementary equipment components
- // **Raised hygiene base** made of one piece without silicone sealing

### ADVANTAGES AT A GLANCE

FUNCTIONALITY, FLEXIBILITY  
AND EFFICIENCY

- // **Flexible, innovative interior layout of sanitary areas** for new buildings, modernisations and renovations
- // Short planning and delivery phases
- // Installation in **only a few hours**
- // **Pre-fabricated system components** are adapted to the different requirements of our customers
- // No silicone sealing used in the wall and ceiling area
- // Second sealing level as **safety kit**
